Package contents - 51, 60, 64, 70, 76 & 86mm. Arbor. Hex key wrench. Reinforcing plate.

Parts Diagram

Operation

ALWAYS ensure that operators are fully comfortable operating the downlight installation kit and understand all of the safety precautions before beginning.

ALWAYS ensure the drill is not connected to a power source and is fully switched off before attaching the holesaw to the drill.

ALWAYS ensure you have checked and are aware of whether there are any wires or pipes above where you are drilling.

Note – We always recommend testing this first on a test piece of material until you become comfortable operating the downlight installation kit.

How to attach a holesaw to a drill

1. Choose the holesaw that has the diameter needed for the hole that you would like to cut.
2. Refer to the parts diagram on page 2 and check the fit of the arbor with the holesaw.
3. Unthread the arbor nut from the arbor.
4. The holesaw in the downlight installation kit has three holes at the back. A drive plate will have been provided in the set. This will need to be used on the back of the holesaw to provide a secure connection.
5. Insert the arbor through the centre of the holesaw and drive plate. Then secure in place using the mandrel nut.
ALWAYS ensure that there is a tight and secure connection between the holesaw and the arbor.
6. On your drill open the jaws of the drill chuck.
7. Insert the arbor into the drill chuck.

ALWAYS ensure that the drill chuck has been tightened and that there is a secure connection before operation.

How to use the downlight installation kit

1. Mark the centre of the hole that you would like to cut. Drill a pilot hole completely through the workpiece.
2. Align the holesaw on the centre of the workpiece with the pilot hole you have just drilled. The drill should be held at 90°.
3. Pull the trigger on the drill and make contact with the workpiece, pressing straight in.
4. Start slowly and increase the speed of the drill when a circle groove has been made in the workpiece, pushing the drill in with moderate pressure.
5. When the hole has been cut release the trigger on the drill.
ALWAYS ensure the drill has come to a complete stop before it is removed from the workpiece.

Operation (continued)

6. When complete remove the holesaw from the drills chuck.
7. Refer to the instructions on the downlight kit for how to install the downlights.

Cleaning & Maintenance

Clean the downlight installation kit with a dry cloth if needed.

Storage

ALWAYS ensure the downlight installation kit is stored out of reach of children.
Store the tool in a secure, dry place.

Disposal

Always check and adhere to national regulations when disposing of any tools that are no longer functional and cannot be repaired.

- Contact your local waste disposal authority for information on how to correctly Dispose of tools.

Environmental Protection

Recycle unwanted materials instead of disposing of them as waste. All tools, accessories and packaging should be sorted, taken to a recycling centre and disposed of in a manner which is compatible with the environment. When the product becomes completely unserviceable and requires disposal, drain any fluids (if applicable) into approved containers and dispose of the product and fluids according to local regulations.
